Cans

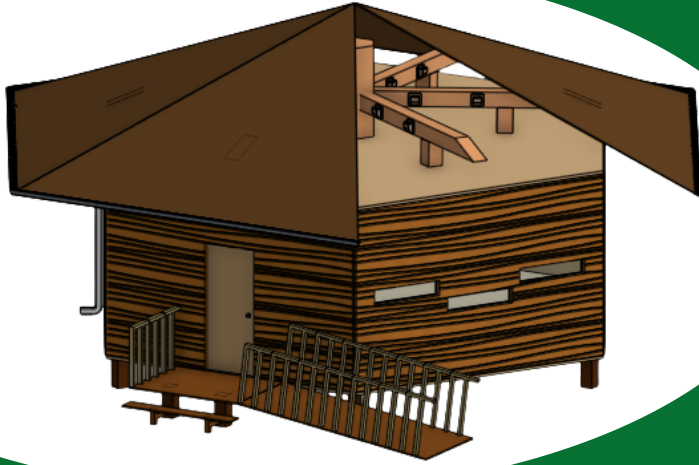

Floor Plan

1. Garbage Can
2. Leaning Bench
3. Partition Wall
4. Viewing Stool
5. Coat Hooks
6. Short Bench

Note: Internal Shelf Beneath Windows Is Not Visible In This Document

LOW IMPACT

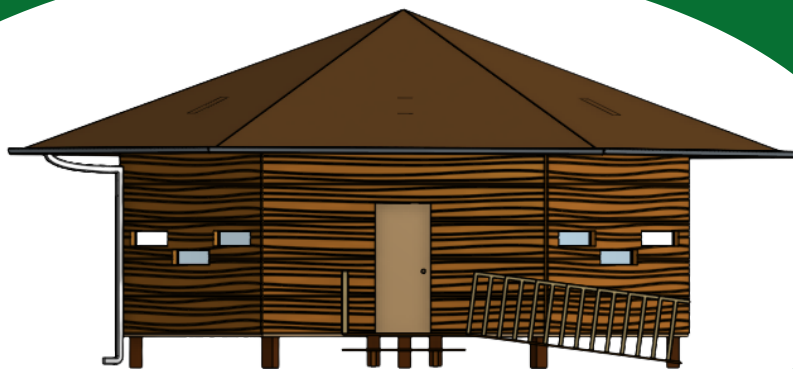

Nesting cups attached to the interior supports of the roof will encourage barn swallows to nest. They mimic their usual mud nests!

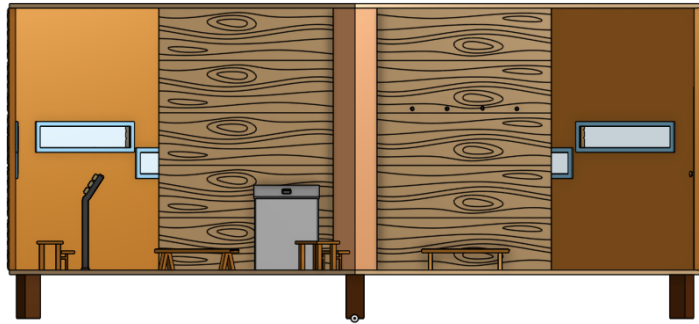

The space between the roof and the ceiling provides space for birds, bats, and bugs to live. This can further be encouraged with artificial nests.

The spacing between the ground and the bottom of the hide counteracts flooding, as well as allowing low grasses to grow to provide a home for small animals.

PARTITION

There are two walls within the hide, the purpose of which is to limit the amount of light which can shine from one side to the other.

The walls also provide a convenient space for coat hooks allowing visitors to get comfortable and enjoy the beautiful view. The separation between the two sides will allow for more people to visit while still feeling alone with nature.

These walls will contain posters (or QR codes) about the wildlife that can be found around the hide. This will allow visitors to know what animals to expect.
